iS7 Feature | Reliability & High Performance

Reliability

▼ Powerful electric current type sensorless vector control

Our iS7 technology includes a competitive and strong low-speed torque control and a speed-precision-driven vector algorithm.

- Speed control range 100:1
- Extremely low torque control capability: 0.1Hz/150% real torque
- Max. torque control capability within the restoration range

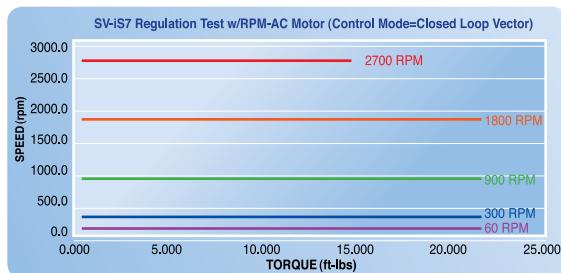

High Performance

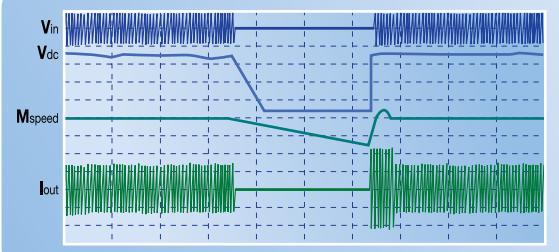

► Sensed vector realizing precise speed/torque control

In the entire speed range including zero speed, powerful torque (more than 250%) performance is materialized through receiving Max. 200kHz frequency pulse via encoder-dedicated board.

- Speed control range 1000:1
- Instant Max. torque control capability 250%
- 50Hz speed control response

► Ride-through (LV trip delay) for sudden power loss

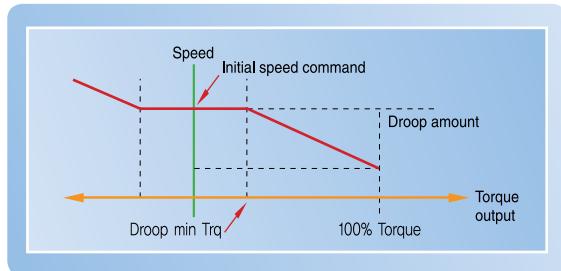

Powerful Performance

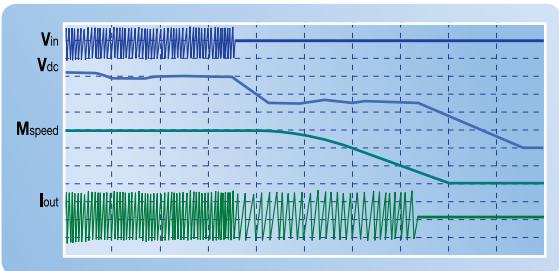

V/F control, V/F PG, slip compensation, sensorless vector control

► Automatic torque balance droop control

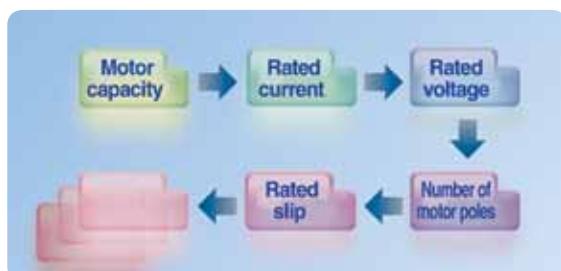

Droop control algorithm adjusts changeable torque driven by speed. This algorithm is easily applicable to open loop linking driving and load sharing driving.

► Kinetic Energy Buffering (KEB) for a stable system stop in case of power loss or failure

► Easy start parameter setting

► Flying start function

Drive capable of quick reliable smooth restarts into bi-directional rotating loads.

► Power and flux braking for maximum deceleration

► Safety Option

The Safety input function meets EN ISO 13849-1 PLd and EN 61508 SIL2 (EN60204-1, stop category 0).

This feature is standard and enables compliance with current safety standards.

iS7 is flexible because it is easily expandable.
